Summary

Manage Docker container images in a fully managed private registry. Push private images into this registry to run them in IBM Cloud Kubernetes Service and other runtime environments. Images are checked for security issues, so that you can make informed decisions about your deployments.

Features

Highly available and scalable private registry

Set up your own image namespace in a multi-tenant, highly available, scalable private registry that is hosted and managed by IBM. Securely store your private Docker images and share them with users in your IBM Cloud account.

Image security compliance with Vulnerability Advisor

Benefit from the automatic scanning of images in your namespaces. Review suggestions, which are specific to your operating system, to fix potential vulnerabilities and protect your containers from being compromised.

Quota limits for storage and pull traffic

Benefit from free storage and pull traffic to your private images until you reach the limit for your free quota. Set custom quota limits for the amount of storage and pull traffic per month so that you avoid exceeding your preferred payment level.

Welcome!

Let's get started by installing the needed CLIs, setting up your first private registry namespace, and pushing your first image.

Install, Set Up, and Log In

1. Install the IBM Cloud CLI.

2. Install the Docker CLI.

3. Install the Container Registry plug-in.

`ibmcloud plugin install container-registry --x 'IBM Cloud'`

4. Log in to your IBM Cloud account.

`ibmcloud login --s https://cloud.ibm.com`

If you have a federated ID, use `ibmcloud login --sso` to log in to the IBM Cloud CLI.

5. Ensure that you're targeting the correct IBM Cloud Container Registry region.

`ibmcloud cr region-set global`

6. Choose a name for your first namespace, and create that namespace. Use this namespace for the rest

Step 3: Download windows 64 bit installer.

Installers

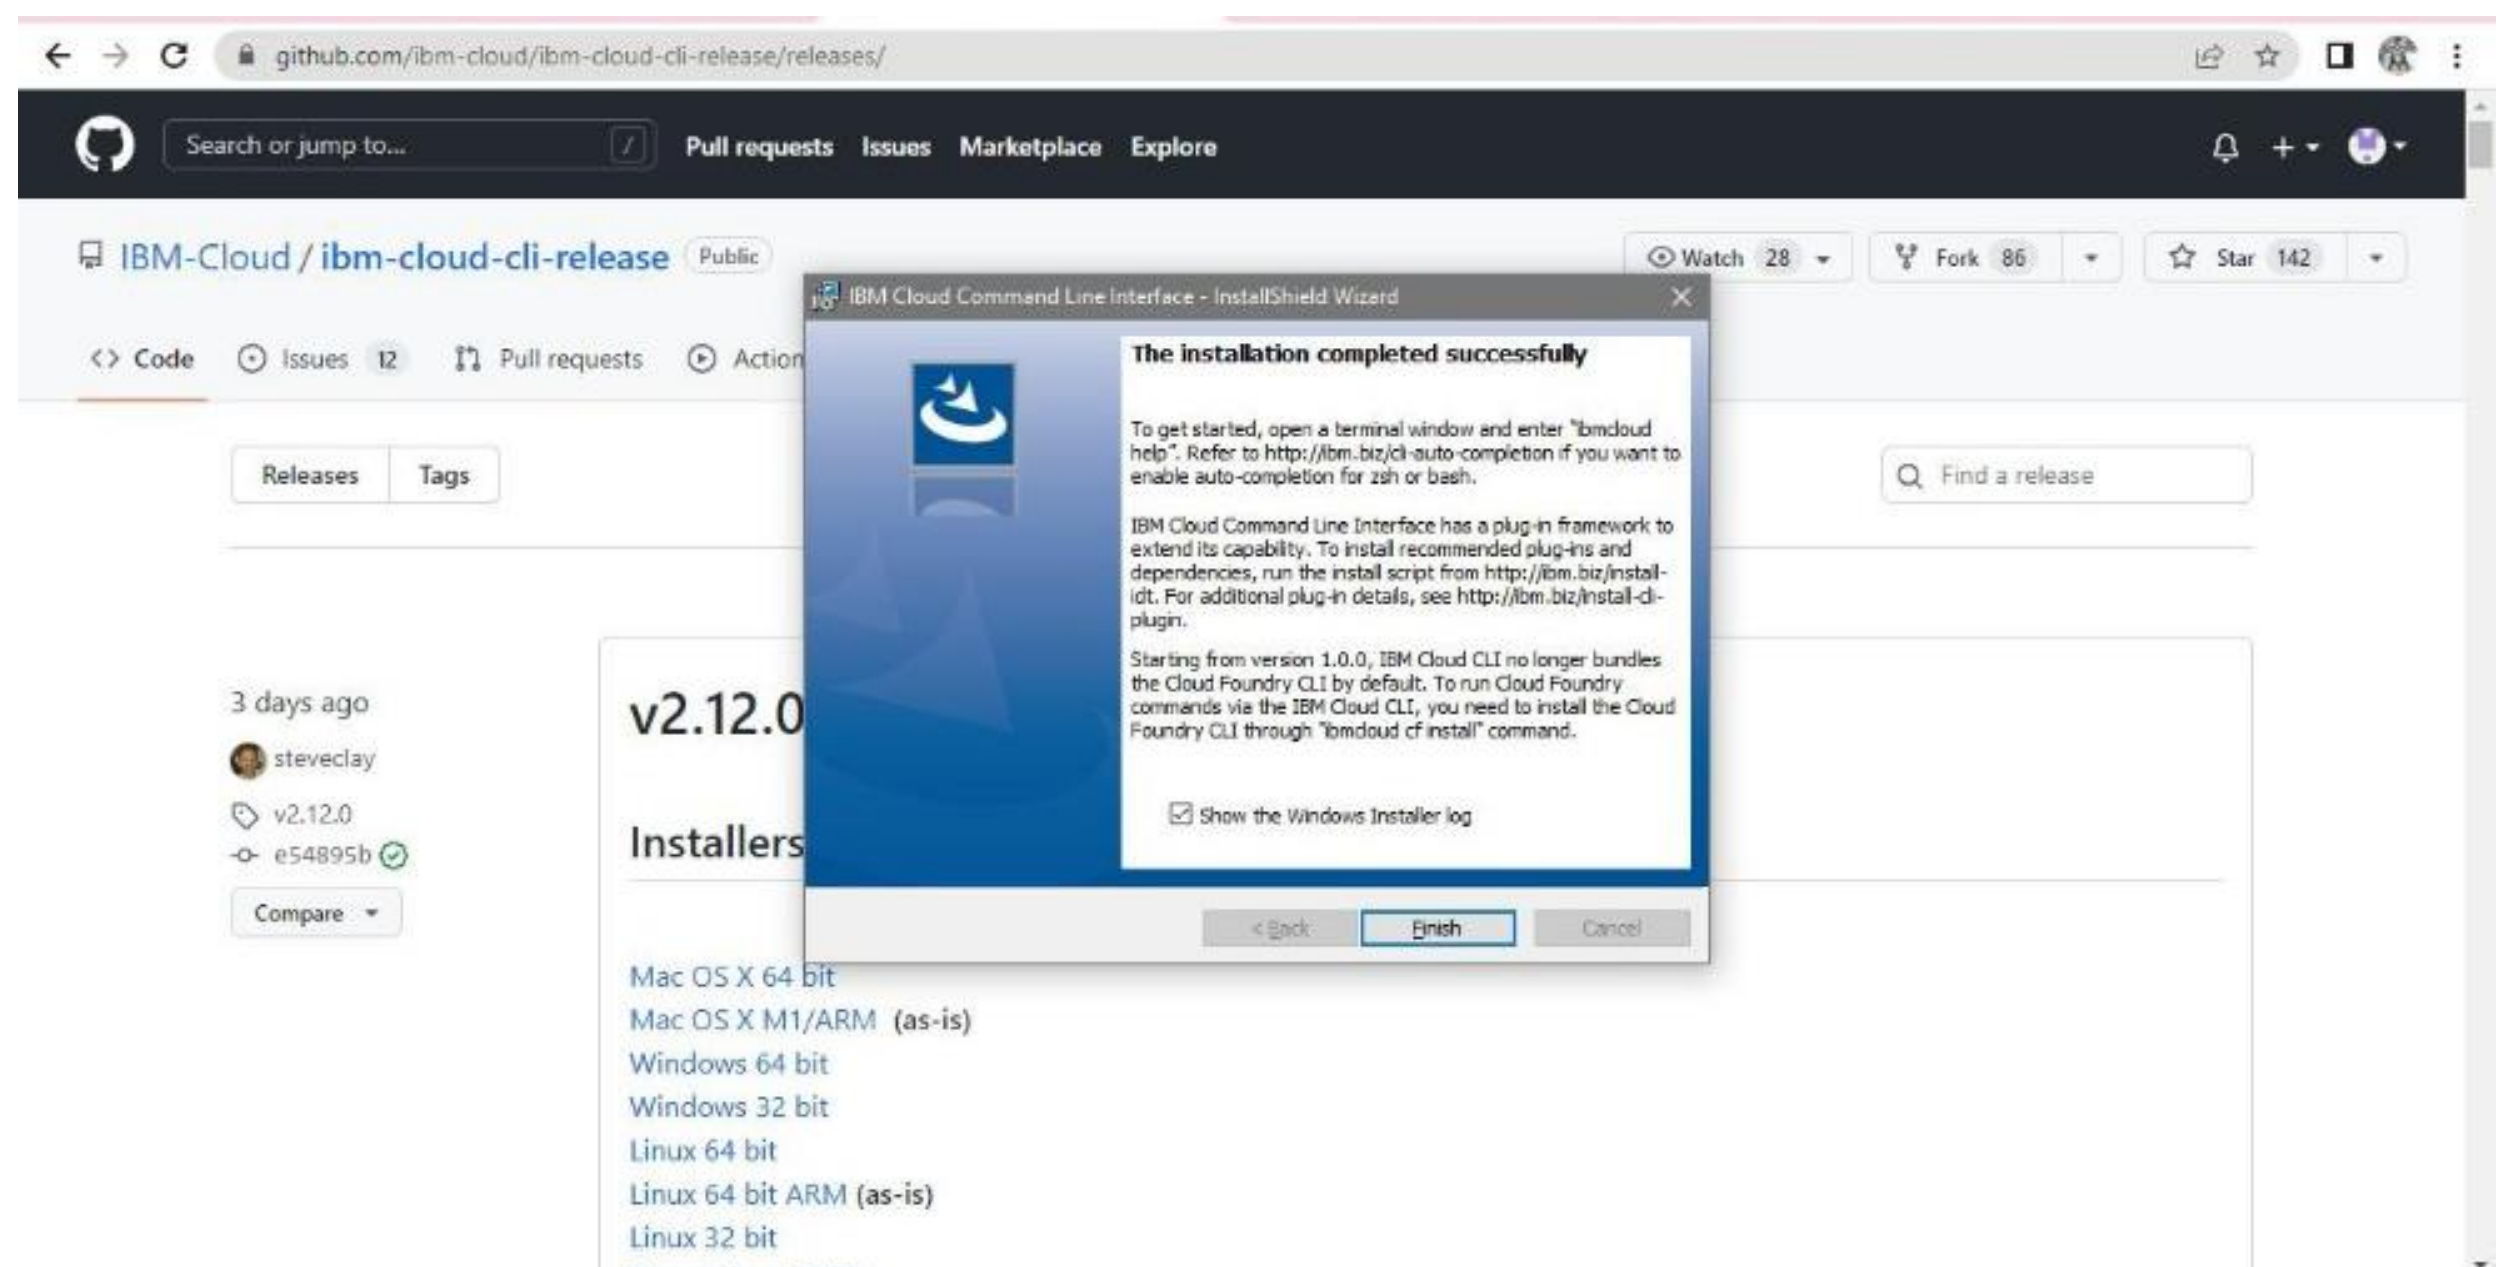

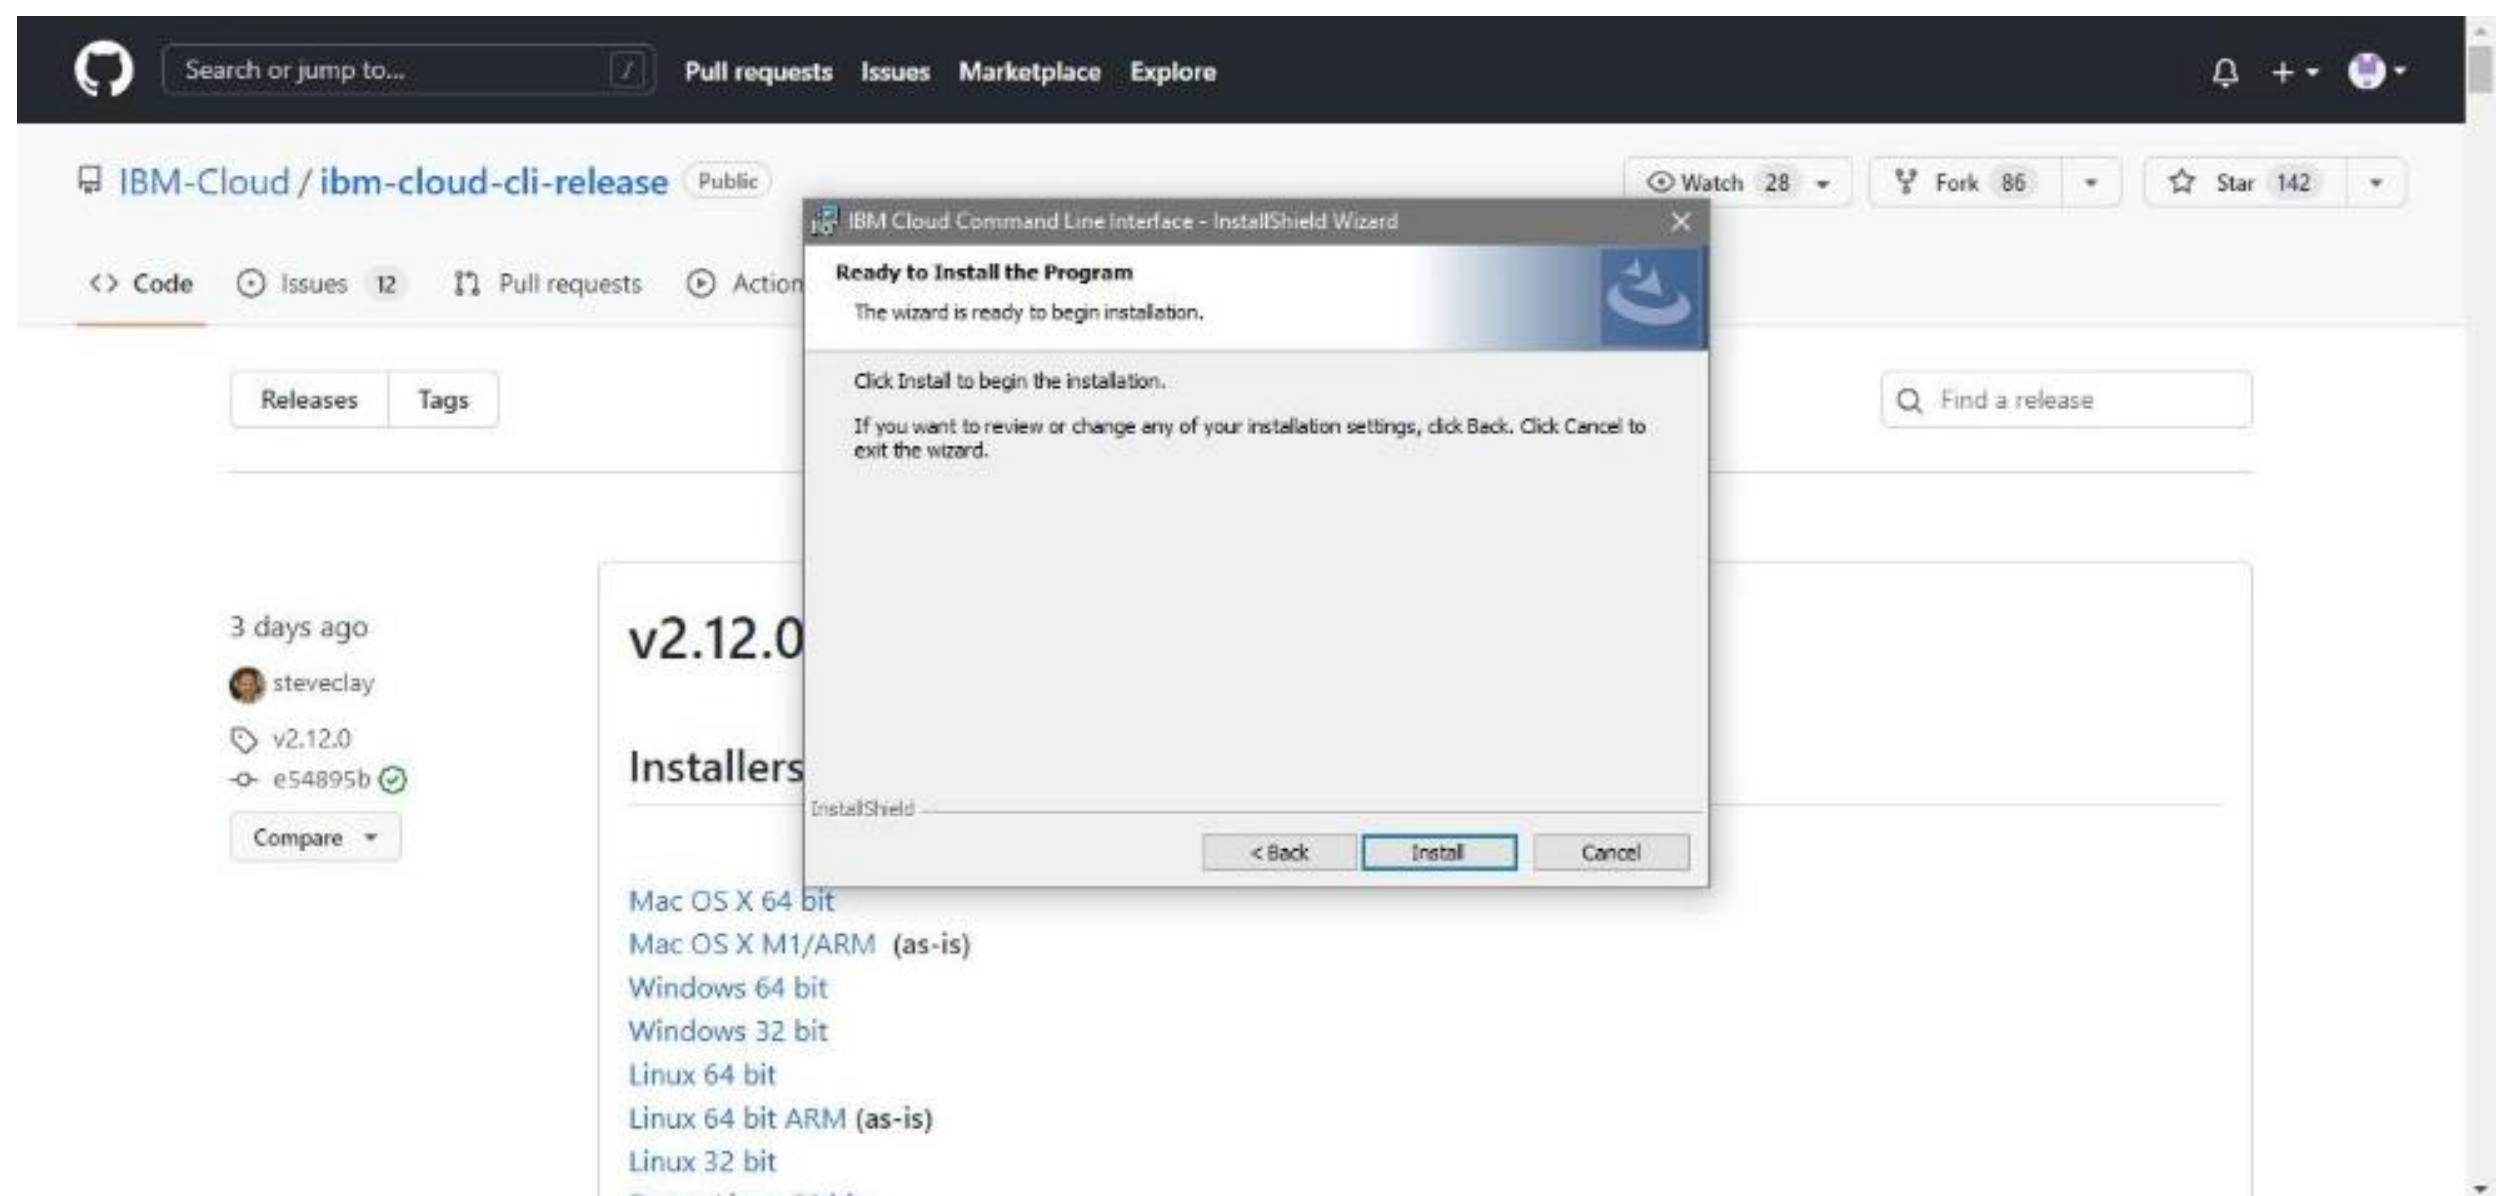

Mac OS X 64 bit
Mac OS X M1/ARM (as-is)
Windows 64 bit
Windows 32 bit
Linux 64 bit
Linux 64 bit ARM (as-is)
Linux 32 bit
Power Linux 64 bit
System/390 Linux 64 bit

Binaries

Mac OS X 64 bit
Mac OS X M1/ARM (as-is)
Windows 64 bit
Windows 32 bit
Linux 64 bit
Linux 64 bit ARM (as-is)

Step 4. Open the downloaded .exe file and run it to install IBM Cloud CLI

OUTPUT: IBM Cloud CLI is installed successfully
